### Build my own professional website and blog

#### Description:

So it has been part of my conscience since 2020 to build a professional website/portfolio listing my projects, aspirations and also my work experience in the various companies I worked at. This would help me project and promote myself and my achievements and solutions out to the world, in order to boost my search for employment.

A start was done, and published online with my own domain name, however i took it down when i started working again because I didnt have the time and energy to continue it's development.

Now that I have even more skills and knowledge this is something I could definitely restart, and it shouldn't take me forever to publish!

#### Targets:

- ☐ Start writing topics with common or simple solutions for smart home automations and various IT solutions.
- ☐ Bring in my IT friends to join this adventure and write about their topics.
- ☐ Advertise this on our websites and publish it.

### ● Build a Vinyl Website/E-Shop - (and) Mobile App at the same time??

#### Description:

This is a very old idea, that could now come to life, because me and my sister are now more 'mature' and we have inherited the private collection of my father's records.

This will hopefully also help me get back into experimenting and building mobile and web application all in one codebase, something I deeply experimented with during COVID times.

This project should provide some sort of income(slowly) from selling the records advertised, which could then turn into a registered business if it comes to getting bigger and it is required by TAX authorities/laws.

When that is up and running, then most of work can be done by my sister who will put those records online - via a simple interface built for her to use.

#### Targets:

- ☐ Discover the technology to be used behind it - **TRY THEM OUT!!!**
- ☐ Once you have the skeleton, start adding items(vinyl) to test it out and train my sister to add records on to the database.
- ☐ Publish the website online and learn SEO to promote it(ask questions to Stathis).

### Build a service and/or a product

#### Description:

It is related with my passion to automate and find solutions to common (1st world) problems.

It can be either a service or a whole package that can be sold to customers, from private (rather large) home owners to hotels.

It can also be a service or R&D for a company that widely does installations to look at scale and implementation for hotels, liek various companies I had the pleasure working with in the field.

#### Targets:

- ☐ Make an actual sellable product - a DIY device that helps automate rooms, lights and organize the fast paced lives of people.
  - ☐ Build an arsenal of custom made solutions.
- ☐ **Write down a business plan!**
- ☐ Get the first 2 clients (more as a testing ground - proof of concept)
  - ☐ Market and promote this.
